

The POS touch screen till that thinks like you

Point-of-Sale terminal solutions. SmartTill BackOffice software is designed to manage large and small venues or multiple venues running POS touch screen terminals. With accessibility to broadband networks, it is now possible to centralise your data management systems with secure remote access to selected information via web reports or online back to a Head Office database.

- Monitor inventory levels and reduce overstocking, shrinkage and theft.
- Designed to manage single and multiple venues connected via the Internet or a Virtual Private Network.
- Multiple price levels available over multiple venues with easy price management.
- Real time updating of all sales and reports for instant business analysis.
- Able to run wireless hand-held units, with the same screen layout as the tills.
- Robust till, with aluminium chassis with no moving parts, i.e. no hard drive or fan. "Reliability"

More about SmartTill

SmartTill BackOffice software is designed to manage large and small venues or multiple venues running POS touch screen terminals. With accessibility to broadband networks, it is now possible to centralise your data management systems with secure remote access to selected information via web reports or online back to a Head Office database.

The SmartTill software modules manage the back office functions and link the Point-of-Sale terminals together to create a total POS solution for clubs, bars, restaurants, pubs and hotels. The software provides comprehensive management of inventory, accounts, membership, loyalty and financial control of your business. You know exactly what your inventory on hand is, up until the last sale, while minimising stock theft, with the real time processing of sales transactions. Product pricing can be set at one location and then sent via the web to other multi-locations.

Using the features available in the SmartTill Membership/Accounts and Loyalty software, which are fully integrated with the touch screen terminals, there is no double handling of transactions, with account balances and customer's loyalty points available across all venues. Happy Hours and promotions can be set back at head office or in the back office and be set months ahead of schedule.

“Most other systems are re-active and, as such, simply cannot compare to SmartTill. To experience what this means you really have to see SmartTill at work!”

Applications

BackOffice software

- Real-time FIFO or average cost inventory tracking
- Control stock and pricing in multiple locations
- Live return-on-investment, under/over stock and purchase order creation
- Easy stocktaking options, even while you're trading
- Live graphs or export into Excel™
